

simple_systems

$$\dot{x} = 2x + u$$

Consider closed loop dynamics using state-feedback

$$\dot{x} = 2x - k_i x$$

Observations

using state feedback

When $k_i > 2$ the stem will level out $k = 3, k = 5$

when $k_i < 2$ $k=1$ the system will continue to grow

What happens at $k = 2$
